

# Write secure settings permission

Home / Doc / Android / Everywhere launcher / Write secure settings permission

With the help of this permission, everylauncher is able to hide your phones navigation bar and/or status bar. To grant this permission to everywhere launcher you have to do following:

## Requirements

- a mac, linux or windows computer
- an USB cable to connect your phone with your computer

## Instructions

1. **Enable developer mode:** go to *android settings => about phone* and look for the **build number** option. Touch it multiple times until developer mode is enabled.
2. **Enable USB debugging:** go to *android settings => developer options* and look for **USB debugging** and enable it
3. **Install adb on your computer:** check out [this](#) for a quick way to do this. At the bottom of the link you'll find links for adb downloads for each system. Download it and extract it to "*C:\adb*"
4. **Connect device with computer:** connect your device with your computer and look at your phone. A prompt may show up asking you to allow debugging by your computer. Accept this.
5. **Open command prompt:** go to the folder where you have extracted adb to and open your command prompt from within this folder. Simply open your command (press windows key, type **cmd** and press enter) and go to the folder where you have extracted adb to like following:

```
cd C:\adb
```

6. **Grant permission:** Insert following command in the command prompt:

```
adb shell pm grant com.appindustry.everywherelauncher android.permission.WRITE_SECURE_SETTINGS
```

Or following on a mac:

```
./adb shell pm grant com.appindustry.everywherelauncher android.permission.WRITE_SECURE_SETTINGS
```

## Notes

Revoke permission

To revoke the permission, simply replace the command in point 6 with following:

```
adb shell pm revoke com.appindustry.everywherelauncher android.permission.WRITE_SECURE_SETTINGS
```

ABOUT ME
